# 18. RESEARCH AND DEVELOPMENT

The President's 2018 Budget provides \$117.7 billion for Federal research and development (R&D), including the conduct of R&D and investments in R&D facilities and equipment (see Table 18-2). This figure applies the new change to the R&D definitions starting with the FY 2018 Budget per OMB Circular A-11, which was released in July 2016 under the previous Administration. Under

the former R&D definitions, the President's 2018 Budget provides \$151.2 billion for R&D. This is a \$2.8 billion (or 2%) increase over the FY 2017 annualized Continuing Resolution level. Detailed R&D definitions and a discussion of the definition change are available in Section II.

#### I. FEDERAL RESEARCH AND DEVELOPMENT FUNDING

Since the founding of this nation, innovation in science and technology has been a cornerstone of America's economic progress. The private sector funds and performs the majority of U.S. R&D, but the Federal government has an important role in funding R&D in areas that industry does not have a strong incentive to invest in and in areas of special concern. Prior federally-funded R&D has greatly advanced human knowledge, and applications of

that knowledge permeate our lives—from the phones we carry, to the cars we drive, to the medicines that return us to health. Recognizing the critical importance of fostering innovation to promote America's interests, including competitiveness, economic growth, and national security, the 2018 Budget supports investments in basic research, early-stage applied research, and technology transfer efforts that will lead to the breakthroughs of the future.

<sup>&</sup>lt;sup>1</sup> This table shows funding levels for Departments or Independent agencies with more than \$200 million in R&D activities in 2018.

#### II. FEDERAL R&D DATA

R&D is the collection of efforts directed toward gaining greater knowledge or understanding and applying knowledge toward the production of useful materials, devices, and methods. R&D investments can be characterized as basic research, applied research, development, R&D equipment, or R&D facilities. The Office of Management and Budget (OMB) has used those or similar categories in its collection of R&D data since 1949. Starting with the FY 2018 Budget, OMB implemented a refinement to the categories by more narrowly defining "development" as "experimental development" to better align with the data collected by the National Science Foundation on its multiple R&D surveys, and to be consistent with international standards. An explanation of this change is included below. Note that R&D cross-cuts in specific topical areas as mandated by law will be reported separately in forthcoming Supplements to the President's 2018 Budget.

# **Background on Federal R&D Funding**

More than 20 Federal agencies fund R&D in the United States. The character of the R&D that these agencies fund depends on the mission of each agency and on the role of R&D in accomplishing it. Table 18–2 shows agency-by-agency spending on basic research, applied research, experimental development, and R&D equipment and facilities.

**Basic research** is systematic study directed toward a fuller knowledge or understanding of the fundamental aspects of phenomena and of observable facts without specific applications towards processes or products in mind. Basic research, however, may include activities with broad applications in mind.

**Applied research** is systematic study to gain knowledge or understanding necessary to determine the means by which a recognized and specific need may be met.

**Experimental development** is creative and systematic work, drawing on knowledge gained from research and practical experience, which is directed at producing new products or processes or improving existing products or processes. Like research, experimental development will result in gaining additional knowledge.

**Research and development equipment** includes acquisition or design and production of movable equipment, such as spectrometers, research satellites, detectors, and other instruments. At a minimum, this category includes programs devoted to the purchase or construction of R&D equipment.

Research and development facilities include the acquisition, design, and construction of, or major repairs or alterations to, all physical facilities for use in R&D activities. Facilities include land, buildings, and fixed capital equipment, regardless of whether the facilities are to be used by the Government or by a private organization, and regardless of where title to the property may rest. This category includes such fixed facilities as reactors, wind tunnels, and particle accelerators.

Comprehensive Government-wide efforts are currently underway to increase the accuracy and consistency of the R&D budget via a collaborative community of practice of Federal agencies which have been working to identify best practices and standards for the most accurate classification and reporting of R&D activities. For example, to better align with National Science Foundation R&D surveys and international standards, OMB has this year narrowed the definition of development to "experimental development." This definition, unlike the previous definition of development, excludes user demonstrations of

<sup>&</sup>lt;sup>2</sup> The application of the new Experimental Development definition is shown starting in FY 2018. FY 2016 & 2017 numbers reflect use of the former Development definition.

<sup>&</sup>lt;sup>3</sup> Unlike previous years, totals for development spending in FY 2018 do not include the DOD Budget Activity 07 (Operational System Development) due to changes in the definition of development. These funds are requested in the FY 2018 budget request and support the development efforts to upgrade systems that have been fielded or have received approval for full rate production and anticipate production funding in the current or subsequent fiscal year.

<sup>4</sup> NIH includes AHRQ funding as the FY 2018 Budget proposes that AHRQ be consolidated within NIH.

<sup>&</sup>lt;sup>5</sup> The decrease in NASA's FY 2018 development funding (compared to prior years) can be attributed to the application of the new experimental development definition starting in FY 2018 as well as the transition of several large Human Exploration and Space Operations programs from the development phase to operations in FY 2018.

206 ANALYTICAL PERSPECTIVES

a system for a specific use case and pre-production development (i.e., non-experimental work on a product or system before it goes into full production). Because of this recent change, the Development amounts reported are

significantly lower than in previous years. In particular, the change in definition of experimental development reduces R&D spending by approximately \$33.5 billion in FY  $2018.^1$

<sup>&</sup>lt;sup>1</sup> This table shows funding levels for Departments or Independent agencies with more than \$200 million in R&D activities in 2018.

<sup>&</sup>lt;sup>2</sup>The application of the new Experimental Development definition is shown starting in FY 2018. FY 2016 & 2017 numbers reflect use of the former Development definition.

<sup>&</sup>lt;sup>3</sup> Unlike previous years, totals for development spending in FY 2018 do not include the DOD Budget Activity 07 (Operational System Development) due to changes in the definition of Development. These funds are requested in the FY 2018 budget request and support the development efforts to upgrade systems that have been fielded or have received approval for full rate production and anticipate production funding in the current or subsequent fiscal year.

<sup>&</sup>lt;sup>4</sup>The decrease in NASA's FY 2018 development funding (compared to prior years) can be attributed to the application of the new Experimental Development definition starting in FY 2018 as well as the transition of several large Human Exploration and Space Operations programs from the development phase to operations in FY 2018.

208 ANALYTICAL PERSPECTIVES

### III. OTHER SOURCES OF FEDERAL SUPPORT FOR R&D

The Federal Government also stimulates private investment in R&D through tax preferences and technology transfer. Historically, dating back to the 1950s, the private sector has performed the majority of U.S. R&D. As of 2014, businesses performed 71% of total U.S. R&D expenditures.<sup>2</sup> The research and experimentation (R&E) tax credit, which was permanently extended through the Protecting Americans from Tax Hikes Act of 2015 (P.L. 114-113), essentially provides a credit to qualified research expenses. R&E tax credit claims have at least doubled over the past two decades, growing from an estimated \$4.4 billion in 1997 to \$11.3 billion in 2013.3 The manufacturing and the professional, scientific and technical services sectors account for about 70% of total claims in 2013.

The President's 2018 Budget seeks to build on strong private sector R&D investment by prioritizing federal resources on areas that industry is not likely to support over later-stage applied research and development that the private sector is better equipped to pursue. Another key means of stimulating private sector investment and bridging Federal government research with industry development is through the transfer of technology. Federal technology transfer seeks to help enable domestic companies to develop and commercialize products derived from government-funded R&D, which can lead to greater productivity from U.S. R&D investments and ultimately promote the nation's economic growth. Recognizing the benefits of this mechanism, the 2018 Budget sustains funding for technology transfer efforts where appropriate.
